Replication data and code for:
"Towards Smallholder Food and Water Security: Climate Variability in the Context of Multiple Livelihood Hazards in Nicaragua"

Instructions for reproducing tables and figures in paper

Tables and figures are generated in Stata, with the exception of some figures created in R. The Stata file should be run first, as it creates some input for the R code.

1. Create a root directory for replication files.
2. Create the following folders within your root directory:
    /data
    /programs
    /output
    /scrap
3. Download files from the dataverse */programs* and */data* folders into the respective folders in your root directory.
4. Open Stata do-file *programs/paper_data_analysis.do* and edit line 61 to identify your root directory path.
5. Run *paper_data_analysis.do* in Stata: Output will be written to */output* folder.
6. Open the R script *programs/plot_figures.R*, edit path to working directory, install necessary packages, and run. Output will be written to */output* folder.
