Data Replication Archive

“Is Putin’s Popularity Real?” V2

Post-Soviet Affairs

November 16, 2015

Contents:

1. RData files: JanCourier.RData and MarCourier.RData

2. Do files: Jan_Replication.R and Mar_Replication.R

The R do files replicate analyses for the January and March surveys, as their titles denote. The files also contain information regarding the variables. To replicate analyses of any data, please use the file for the relevant month. Due to ongoing research, the RData files include only those variables analyzed in the paper.

The R code was run on R 3.2.2. Required libraries (not including dependencies) include: ggplot2 and list.

This version supersedes V1, which contained unclear transliterations of survey responses for some variables and included data cleaning code.
