IRI Index File update

The FLIP model can use hmF2 and NmF2 from the IRI95 model. The IRI model requires its own indices that are input to FLIP with the file IG-RZ.DDD.

To update this file:

1. Open IG-RZ.DDD in a text editor.
2. Go to the IRI web site http://irimodel.org/indices/ and open ig_rz.dat
3. Copy the data from ig_rz.dat and paste into IG-RZ.DDD
4. Replace all the commas with spaces (for some reason, the commas cause a problem).
5. Save the IG-RZ.DDD file and enjoy.
